(54) Title: READER INTERFACING DEVICE

(57) Abstract: The invention provides a reader interfacing device (120) for providing a communication path between: (a) a tag or smart label reader (20) configured to emit and receive interrogating radiation suitable for interrogating tags or smart labels (40) at a first radiation frequency; and (b)a remote tag or smart label (110) configured to be interrogated using radiation of a second frequency, the first frequency (13.56 MHz) and the second frequency (2.45 GHz) being mutually different by at least an order of magnitude, and the reader (20) being operable to communicate through the device (120) to the remote tag or smart label (110). The device (120) includes a power supply (140) for converting interrogating radiation received at the device from the reader to generate power supply potentials for powering the device (120). Moreover, the device (120) is mutually magnetically coupled to the reader (20) for receiving the interrogating radiation therefrom and for providing a modulated load thereto for communicating back to the reader (20). In order to achieve such magnetic coupling, the device (120) includes a loop antenna (310) for magnetically coupling to a corresponding loop antenna (60) of the reader. The device (120) provides, for example, the advantage that the reader (20) can conform to a standard ISO 15693 and the device (120) enables remote tags and smart labels not conforming to the standard to communicate with the reader (20).

rnational application No. PCT/GB 03/02846

Box I Observations who	ere certain claims were found unsearchable (Continuation of Item 1 of first sheet)
This International Search Repo	ort has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
1. Claims Nos.: because they relate to	subject matter not required to be searched by this Authority, namely:
2. Claims Nos.: because they relate to	parts of the International Application that do not comply with the prescribed requirements to such
an extent that no mea	iningful International Search can be carried out, specifically:
3. Claims Nos.:	
because they are dep	endent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II Observations who	ere unity of invention is lacking (Continuation of item 2 of first sheet)
This International Searching A	uthority found multiple inventions in this international application, as follows:
see addition	al sheet
	nal search fees were timely paid by the applicant, this International Search Report covers all
searchable claims.	
2. As all searchable clair of any additional fee.	ms could be searched without effort justifying an additional fee, this Authority did not invite payment
	equired additional search fees were timely paid by the applicant, this International Search Report ims for which fees were paid, specifically claims Nos.:
4. X No required additional restricted to the inver	al search fees were timely paid by the applicant. Consequently, this International Search Report is ation first mentioned in the claims; it is covered by claims Nos.:
1-12, 14-16	
·	
Remark on Protest	The additional search fees were accompanied by the applicant's protest.
	No protest accompanied the payment of additional search fees.

International Application No. PCT/GB 03/02846

#### FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. Claims: 1-12,14-16

Claim 1 and its dependent claims refer to an interface device for providing a communication path between a) a reader working at a first frequency and b) a remote tag or smart label working at a second frequency.

2. Claim: 13

Claim 13 concerns a remote tag or smart label incorporating amplifying means for reflectively amplifying a received signal.
